Number Lookup

Real-time mobile number validation

Seamlessly check number validity
to optimise routing, costs and accuracy
of your mobile projects.

infobip

NUMBER LOOKUP

REAL-TIME, GLOBAL MOBILE NUMBER VALIDATION

With data collected by businesses growing exponentially, accurate mobile number databases are now deemed as one of the most critical data verticals, as they allow companies to accurately send notifications, alerts, service information, or authenticate access to online tools and services.

Infobip's Number Lookup allows you to check the status and validity of mobile numbers, and the country/mobile network they are associated with. Portability and roaming info can also be obtained. This can save large amounts to global companies with millions of users, and optimise processes in real time.

DATABASE CLEANING

Database cleaning enables you to identify whether a mobile number is unused, inactive, ported or roaming. It allows you to work with accurate data, optimise commercially and improve targeting, which has an impact on your ROI and customer satisfaction.

PORTABILITY IDENTIFICATION

Real-time number portability lookups will optimise messaging and VoIP charging and routing for a range of companies and various telecoms network services.

USE CASES

OTT COMPANIES / MOBILE APPS

Check if the number is a mobile or landline before sending an authentication SMS to improve efficiency and boost conversion rates.

CALL CENTRES

Automatically check number type before establishing a phone call to optimise routing and costs.

SMS & MMS AGGREGATORS

Check number type and availability before sending your messages to optimise routing and costs.

VOIP AGGREGATORS / RESELLERS

Check number type before establishing a voice call to optimise routing and costs.

BANKING AND FINANCE

Optimise delivery of one-time PINs. Add an extra layer of security and risk assessment for ATM transactions abroad.

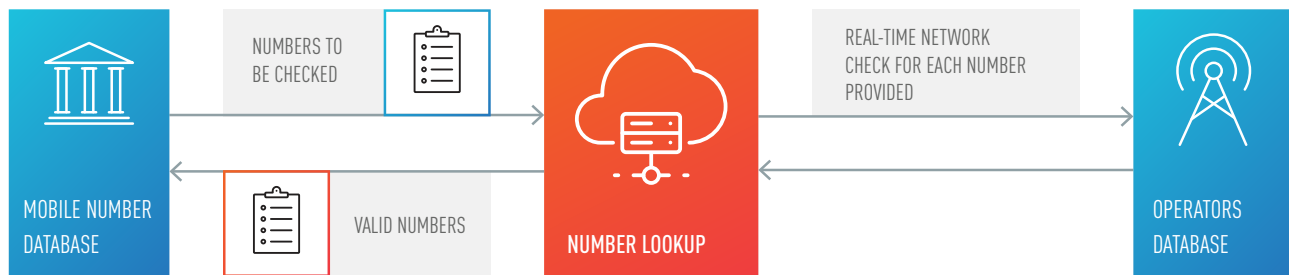

DIGITAL MARKETING AGENCIES

Optimise costs, accuracy and targeting of your multi-channel mobile campaigns.

CLIENTS

INFOBIP

MNO

FEATURES

- Service type: Synchronous / asynchronous
- Interfaces: HTTP / SMPP v3.4 / SIP / ENUM
- Infobip Portal - advanced web interface
- Instant integration via JSON, XML, cURL, PHP, Ruby, Python, Java, C#, JavaScript
- Availability: 99.99%
- Connection type: IP (VPN access on request)
- Global coverage and availability
- 24/7 expert technical support, with average resolution time of 50 min.

KEY BENEFITS

- Reduce costs in voice and SMS delivery
- Avoid MNP/LNP issues and interworking fees by optimising messages/call routing
- Optimise charging and billing
- Guaranteed QoS and service availability
- Easy integration into existing systems
- Tailored packages to fit specific market needs and trends
- Use alongside other Infobip services

UNIQUE ADVANTAGE

Carrier-grade platform with minimal response times and high throughput

Global coverage and service availability

Quick integration, regardless of your programming language or system complexity

Set up Number Lookup service in no time! Visit our API developer hub at: dev.infobip.com.
